## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James Long on 9/26/2008

The change made to the claims is: add the limitation "wherein the communication pathway directly links the servo control and ECC decoder circuit with the graphics decoding circuit, and the register accessible by the graphics decoding circuit enables the graphics decoding circuit to directly access the decoded data through the memory controller" from claim 18 to the independent claim 1 and claim 12 and cancel claim 18. The limitation of claim 18 is added to the independent claim 1 so that claim 1 becomes:

An electronic circuit comprising:

a servo control and ECC decoder circuit ... wherein the servo control and ECC decoder circuit further comprises a register accessible by the graphics decoding circuit that indicates the location of decoded data in the external memory, wherein the communication pathway directly links the servo control and ECC decoder circuit with the graphics decoding circuit, and the register accessible by the graphics decoding circuit enables the graphics decoding circuit to directly access the decoded data through the memory controller.

Art Unit: 2621

The limitation of claim 18 is added to the independent claim 12 so that claim 12 becomes:

An electronic circuit fabricated on a monolithic substrate, the circuit comprising:  
a servo control and ECC decoder circuit for controlling ... a third register  
indicating a size of the decoded data; wherein the communication pathway directly links the servo control and ECC decoder circuit with the graphics decoding circuit, and the register accessible by the graphics decoding circuit enables the graphics decoding circuit to directly access the decoded data through the memory controller.

The present invention is directed to an electronic circuit with a single memory controller. Each independent claim identifies the uniquely distinct feature "the communication pathway directly links the servo control and ECC decoder circuit with the graphics decoding circuit, and the register accessible by the graphics decoding circuit enables the graphics decoding circuit to directly access the decoded data through the memory controller". The closest prior art, Shim (5,970,208), Romano et al. (5,586,306) and Yuen et al. (US 2003/0190138 A1) disclose conventional electronic circuits, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.
